

HAAPAVESI CityDesk Wizard

Like all of our other WebWizards HAAPAVESI also offers a variety of configuration possibilities. You can easily adapt the template to the individual needs of your site design.

The best thing about CityDesk and HAAPAVESI is that you don't need to have any HTML or web programming knowledge.

Layout

HAAPAVESI creates a frame based website with navigation area, top area, bottom area and main area for your contents. It always appears nicely centered within your browser window.

- each frame can be adapted pixel-precise in width and height
- each frame can be displayed in a separate color
- each frame can have an individual background image

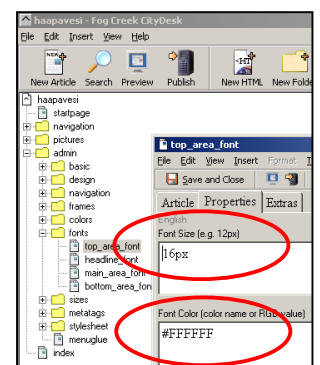

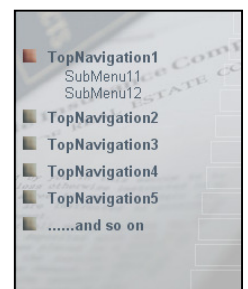

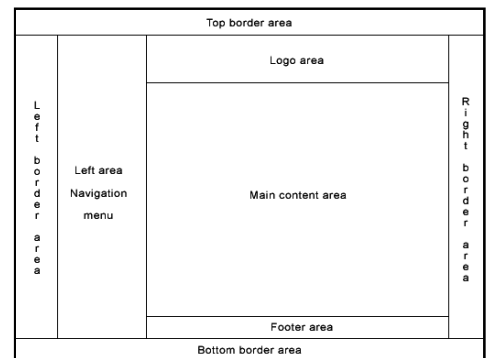

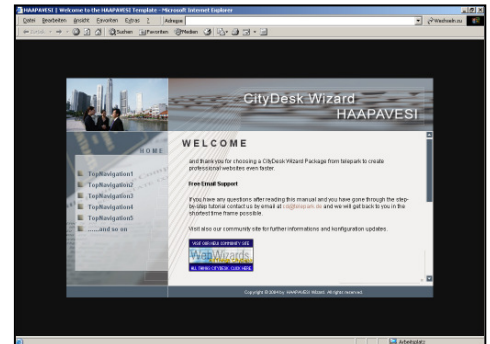

Navigation

The HAAPAVESI navigation allows you

- to create as many top and sub navigation items as you like
- to define the position and size of the navigation menu pixel-precise
- to define the position and line-space of the menu items pixel-precise
- to define fonts and colors, rollover behaviors and images to your needs

Article Based Configuration (ABC)

ABC which stands for Article-Based-Configuration enables you to set site design parameters simply by filling the appropriate article fields and without having to write a single line of HTML, CSS or CityScript template code.

HAAPAVESI settings:
